Material Breakdown	
Material	Description
Fluoroplastic Blue or White	Inert, biocompatible and very smooth. The rigid material facilitates tube insertion and its nonstick characteristics may reduce adhesion formation and/or clogging. Summit Medical uses only 100% certified virgin material.
Silicone Elastomer Blue	Extremely soft, compliant and elastic material. It is easily manipulated, extremely lubricious, and allows vent tubes to be easily compressed for insertion or removal. Summit Medical uses 100% certified medical grade silicone resin.
Titanium E	One-half the weight of stainless steel with many of the same features and benefits. It has excellent biocompatibility, is extremely resistant to corrosion and attack by body fluids, its rigidity facilitates insertion and it is extremely durable. Summit Medical uses 100% certified ASTM F136-92 titanium.
MRI Information The titanium vent tube and stainless steel wire have been determined to be MR-conditional according to the terminology specified in the American Society for Testing and Materials (ASTM) International, Designation: F2503-05. A patient with this device can be scanned safely immediately after placement under the following conditions: <ul style="list-style-type: none"> • Static magnetic field of 3 Tesla or less • Maximum spatial gradient magnetic field of 720-Gauss/cm or less Additional information can be obtained by contacting Summit Medical at 651-789-3939 or 1-888-229-2875.
